

Dr. Jude Nicholas is a clinical neuropsychologist at the Department of occupational medicine at Haukeland University Hospital and at Statped Vest centre for special education. He is also affiliated to the institute for cognitive therapy in Bergen, Norway. He is author of several articles and book chapters, especially on Congenital Rubella Syndrome and CHARGE syndrome. His research interests include cognitions in Auditory Processing Disorders, attention and executive functions in patients with tinnitus and his current research investigates the effects of sensory impairment on the development of neuropsychological functions in the deaf blind, particularly tactile cognitions. He is a member of the editorial board for the Journal of the Norwegian neuropsychological association and a committee member of the Norwegian neuropsychiatric society.
